

# S1000D interact™ v3.2

## Feature Enhancements

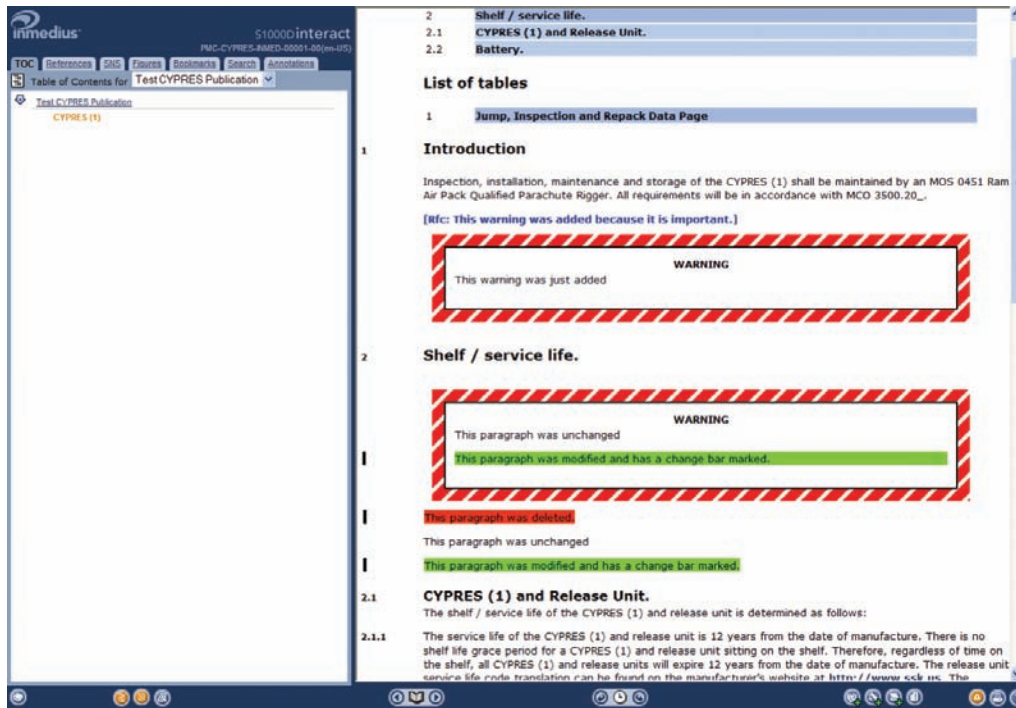

### Features New Change Markers, Enhanced Ease of Use and Seamless Integration

**S1000Dinteract** is a browser-based system allowing local users to view and share S1000D™ compliant documentation on a standalone basis, or while connected to a server over an Intranet or the Internet. **Interact** v3.2 is a maintenance release that has been updated for improved ease of use and seamless integration with **S1000Dmanager**™ v3.2. The software update includes items and other enhancements requested by our valued clients. A new Change Marker feature is included in the June 2009 software release that displays alterations from previous versions of documentation. This document highlights, illustrates and briefly describes those additions and changes.

### New Change Bars Highlight Alterations Based on Attributes

With **Interact** Version 3.2, a new function displays Change Markers based on the attribute's Mark, Level, and the Element <change>. The Mark attribute indicates if the change should be shown, and the Level attribute indicates what version it applies to. Users have the option to show or hide changes, with the 'Reason for Change' displayed if provided by the author.

*Changes are highlighted on screen that compares information in the current document to a previous version. Sections of data that have changed are highlighted in green if added or modified, or in red if deleted. A Change Bar indicates the location of information changes.*

When the user receives a documentation update, he can now select an option with **Interact** that clearly indicates any data that has been changed from a previous version. This capability allows the user to easily check to see if the information has been altered, quickly review those changes, and make the appropriate modifications to existing work processes.
